

Curriculum Vitae

Dužanka Petrović

Education:

Student of the Faculty of Medicine in Nis

1974 doctor of medicine

1975-1991 After a medical internship, she started working at the drug factory KRKA, as an expert and later as a scientific marketing advisor.

In January 1988, she passed the specialist exam in neuropsychiatry

In February 1991, she founded the specialist practice Private Practice Petrović

In 1991, she was educated in traditional Chinese medicine at the ECPD of the UN in Belgrade and in China

Until today, she has been constantly improving her professional skills in the field of integrative medicine, and in this way, in her practice, she has combined knowledge from classical medicine, pharmacy and complementary methods from the field of traditional Chinese medicine- acupuncture, psycho-energy therapy, EFT and TFT, reconnection, Tesla metamorphosis, new technologies of consciousness.

Actively participated in the development of private medical practice and the formation of the private medical chamber.

For a long period of time, he was a permanent collaborator of the cult show U zrdavam telo.

From 2017 to the present, he has been a lecturer in education in the field of acupuncture at ECPD UN.

In February 1991, dr. Dužanka Šana Petrović opened a specialist practice of neuropsychiatry and acupuncture.

During that period, she dealt with early diagnosis and prevention of neurological and psychiatric diseases. She developed special methodologies for the prevention and treatment of various diseases by combining Western and Eastern medicine (complementary medicine). Education within ECPD in acupuncture and knowledge in the field of neuropsychiatry acquired through specialization within modern medicine. In 1991, she combined all that in her practice. Ph.D. Dužanka Petrović is currently a lecturer and professor within the European Center for Peace and Development (ECPD) Belgrade, founded by the United Nations - University for Peace. She gained extensive experience in the treatment of allergies, headaches, pain syndromes, endocrine disorders, neuroimmunological and psychosomatic diseases that arise as a result of uncontrolled stress.
